BE FREE™

ADVANCED ORTHO K LENS SYSTEM

A New Evolution in Myopia Management

Special Features

- **Fitting Software-Driven Design**
- **Simply Prescribed from Topography or K's, Rx and VID**
- **Empirically Fit – No Trial Lenses or Inventory Needed**
- **Treats High Myopia**
- **Corrects Higher Astigmatism**
- **Software Assisted Fit Optimization**
- **Optimized Treatment Zones for Advanced Myopia Management**

Each BE FREE Ortho K lens is custom designed specifically for the patient's eye shape, age, vision and lifestyle

The BE FREE design offers a family of lenses for a wide range of potential orthokeratology patients. The fitting software is used to construct the initial custom order and is designed to optimize the patient fitting process for successful results.

BE FREE offers choices

The BE FREE can be fit on a wide range of myopic and astigmatic eyes. Additionally, it can employ smaller or larger optical zones where required to meet the needs of each patient. The BE FREE lens can be constructed with a toric back surface for higher corneal astigmatism cases. This single Ortho K lens design offers practitioners a comprehensive orthokeratology system for a wide range of patient types.

The BE FREE Advanced Ortho K Lens System successfully delivers

- a versatile lens design to accommodate a broad range of myopic patients
- a convenient, accurate fitting technology
- a healthy vision correction option to differentiate your practice and increase profitability
- patient loyalty, referrals and happiness
